ATUL KUMAR KHETAN

Senior Cloud Engineer | Cloud & Data Center Infrastructure | Kubernetes, Terraform, Observability

Hyderabad, India • +91 78918 38061 • khetanatulz@gmail.com • linkedin.com/in/atul-khetan

SUMMARY

Senior Cloud Engineer with 7 years designing and operating large-scale infrastructure across public cloud and colocation data centers. Currently at Uber (L5), owning observability, automation, and capacity for a 2,000+ host, 6,000+ device fleet across 3 data centers. Previously led DevOps for 100+ microservices on multi-region EKS at 99.99% uptime, cut cloud spend ~40% (~$500K annually), and delivered FedRAMP, PCI DSS, and SOC 2 compliant platforms. Owns Infrastructure as Code (IaC) standards, Service Level Objective (SLO) definition, and on-call across AWS, GCP, and bare-metal estates.

TECHNICAL SKILLS

Cloud Platforms: AWS (EKS, EC2, S3, IAM, VPC, Direct Connect, Secrets Manager), GCP (GKE, Cloud SQL, Memorystore, Cloud Armor, GCS), Azure

Containers & Orchestration: Kubernetes, Docker, Helm, ArgoCD, GitOps, KServe, Knative, KVM, Apache Kafka (KRaft)

Infrastructure as Code (IaC): Terraform, Ansible, Puppet, Bazel, Helm

CI/CD: Buildkite, GitLab CI, GitHub Actions, Jenkins, Azure DevOps, Canary & Blue-Green Deployments

Observability & Site Reliability Engineering (SRE): Prometheus, Grafana, M3, Loki, Tempo, Alertmanager, PagerDuty, PromQL, node_exporter, SLI/SLO, Incident Response, On-Call, Disaster Recovery (RTO/RPO)

Data Center & Networking: Colocation, Bare-Metal Provisioning, Capacity Planning, NetBox (DCIM), Rack & Site Topology, VPC/Subnet Design, VPN, Load Balancing, Multi-NIC Routing, Bastion Hosts

Security & Compliance: Zero Trust (Pomerium), SSH Certificate Authority, PKI/mTLS, HashiCorp Vault, Keycloak, OIDC/SSO, IRSA, Least-Privilege IAM; FedRAMP, NIST 800-53, PCI DSS, SOC 2, ISO 27001

Languages & Platforms: Python, Go, Bash, SQL, YAML; Linux (Ubuntu, Debian, RHEL), macOS Fleet at Scale (launchd, MDM), Git

WORK EXPERIENCE

Senior Cloud Engineer (L5) **Jan 2026 – Present**

Uber Technologies Inc. *Hyderabad, India*

- **Re-architected fleet observability** for 1,240+ bare-metal hosts across 7 labs and 3 data centers, replacing per-host push scripts with pull-based Prometheus federated into M3 through a 4-pod mTLS proxy tier — reaching **100% fleet reporting at >99% scrape success**.
- **Expanded the physical device-lab estate into new colocation data centers**, standing up per-site Prometheus/Grafana control planes, rack- and subnet-aware host auto-discovery, Pomerium zero-trust access, and NetBox-based DCIM — onboarding **3 colo sites** with zero-touch provisioning.
- **Cut mean time to repair (MTTR) across 8 labs** by instrumenting 60-second health telemetry on USB hubs, device state, network links, and certificate expiry, then routing tiered P0/P1 alerts to PagerDuty and Slack **within 2 minutes** of detection.
- **Operated a 2,000+ Mac mini fleet backing 6,000+ tethered iOS/Android devices** — hardware with no cloud-native tooling — migrating **1,008 of 1,009 nodes with zero CI downtime**; root-caused USB/ADB failures and shipped remediation that **cut unresponsive devices 60% (232 to 93)**.
- **Designed a three-tier cascade rsync fabric** with multi-NIC routing that reduced 10 GB toolchain rollouts to 100 hosts **from 2–3 days to under 4 hours unattended**, cutting engineer monitoring time ~90% and eliminating lab network saturation.

- **Built the DeviceLab CLI (Python)** replacing Apple Remote Desktop for fleet operations: discovery of 2,000+ hosts **in under 3 minutes** and parallel execution across **500 nodes in under 60 seconds** over Pomerium-proxied SSH, plus 90-day capacity forecasting within ±15%.
- **Scaled CI capacity beyond macOS** by provisioning x86 servers as KVM-backed Android emulator hosts through an idempotent 10-stage bootstrap covering PKI secrets, SSH certificate auth, udev rules, Android SDK, and Buildkite agents — replacing a Puppet-managed flow.
- **Authored the team's 6-month operational excellence roadmap** (112 tickets across 5 epics) and drove delivery with bi-weekly stakeholder reporting; consolidated fragmented tooling into the Bazel monorepo, **raised core-module test coverage from 81% to 100%**, and moved **100% of hosts onto SSH certificate authority**.

Lead DevOps Engineer **Mar 2025 – Dec 2025**
Sprinklr — enterprise customer experience management (CXM) SaaS *India*

- **Led DevOps across multiple product lines**, mentoring engineers and setting the reliability and security standards adopted by platform teams running **100+ services at 99.99% uptime**.
- **Re-architected multi-region EKS and Kafka (KRaft) clusters** on an ArgoCD GitOps model with canary and blue-green rollouts, migrating 100+ services with near-zero downtime and **cutting rollback incidents 70%** through progressive delivery validation.
- **Owned SLO-based alerting and the on-call rotation** across Prometheus, Grafana, Loki, and Tempo via PagerDuty and Grafana OnCall, **reducing MTTR 45% and alert noise 60%**.
- **Delivered ~25% AWS cost reduction** through right-sizing, autoscaling policy, and FinOps dashboards that gave engineering leaders per-service spend accountability.
- **Hardened the platform** with IRSA, OIDC federation, and automated secret rotation using Vault and AWS Secrets Manager, aligning controls to SOC 2 and ISO 27001; standardized Terraform modules reused org-wide.

Senior DevOps Engineer **Jul 2019 – Mar 2025**
MavQ Inc. (formerly MTX Group) — enterprise SaaS & government technology *Jaipur, India*

- **Architected compliant multi-cloud workloads** across AWS, GCP, and Azure to **FedRAMP, NIST 800-53, and PCI DSS** controls, integrating Keycloak SSO/OIDC and least-privilege IAM; passed federal and payment audits with no major findings.
- **Cut cloud spend ~40% (~$500K annually)** through Terraform-driven autoscaling, spot instance strategy, and continuous right-sizing across production estates.
- **Re-engineered CI/CD for 40+ microservices** with one-click deployment automation, **reducing deployment time 40%** and removing manual release toil.
- **Migrated legacy workloads to Kubernetes** with centralized Prometheus, Grafana, and Loki monitoring, **reducing downtime ~30%**; optimized AI/ML serving on KServe and Knative to **cut peak response time 30%**.
- **Built and tested disaster recovery** with automated cross-region backups and scheduled failover drills, **reducing recovery time objective (RTO) ~50%**.

EDUCATION

B.Tech, Computer Science Engineering — Amity University, Jaipur *2015 – 2019*

CERTIFICATIONS

Google Cloud Professional Cloud Architect • Google Cloud Associate Cloud Engineer

Recognition: Employee of the Year (2020); Above & Beyond Award (2021, 2022); Employee of the Month (2023)
